## **Introduction**

A Library Management System is a software application designed to automate and simplify the processes involved in managing a library. Traditional library operations—such as book issuing, returning, cataloging, user registration, and maintaining records—are usually time-consuming and prone to human error. This system provides a digital platform that ensures accuracy, efficiency, and easy access to library information. The proposed LMS will support both students/members and library staff, enabling smooth book circulation, inventory management, and report generation.

## **Objectives**

- The main objectives of the Library Management System are:
- To automate manual library operations.
- To maintain digital records of books, members, and transactions.
- To provide quick and efficient book search functionality.
- To reduce paperwork and minimize human errors.
- To track issued/returned books and calculate fines automatically.

- To generate useful reports for administration.

## **Project Category**

### **Application Development using Java & MySQL**

## **Problem in Existing System**

- ♣ Paper forms are difficult to manage
- ♣ Records cannot be searched quickly
- ♣ High chances of human errors
- ♣ Document verification is slow
- ♣ Fees tracking becomes confusing
- ♣ No proper backup of student data
- ♣ Difficult to maintain long-term records

## **Proposed System**

The proposed LMS will:

- Digitize book and member records
- Provide a user-friendly interface
- Offer real-time status of book availability
- Automate issuing and returning transactions
- Automatically calculate fines
- Generate daily, weekly, and monthly reports

This system will enhance efficiency, accuracy, and accessibility.

# Modules Description

## **1. Admin Module**

This module is the core control panel of the Library Management System. It allows the administrator to manage all master-level data and oversee daily operations.

### **• Manage Books, Categories, Authors**

- The admin can add new books into the system with details such as title, author, category, ISBN, edition, and publication year.
- Books can be updated, deleted, or marked as unavailable.
- Admin can create and maintain different book categories (e.g., Science, Literature, Commerce).
- Authors' information can be added and updated to classify books effectively.

### **• Manage Members**

- Admin can register new members/students and maintain their profiles.
- The module handles membership activation, renewal, or blocking in case of misuse.
- Admin can view a member's issue history, fines, and book requests.

### **• View Reports**

- Admin can generate various system reports such as book stock status, most issued books, pending returns, fines collected, etc.
- These reports help in decision-making and monitoring daily library operations.

---

## **2. User / Member Module**

This module is designed for library users or students, enabling them to interact with the system independently.

### **• Search Books**

- Members can search for books by title, author, category, or ISBN.
- The system shows availability status (Available/Issued/Reserved).
- Users can view detailed book information.

### **• View Issued Books**

- Members can view all books currently issued to them with due dates.

- This helps users avoid late returns and fines.
- **Request for Book Issue / Renewal**
  - Users can request a book issue if it is available.
  - If the book is nearing the due date, users can submit a renewal request.
  - The admin/librarian approves or rejects these requests based on rules and availability.

---

### **3. Transaction Module**

This is the functional module where all book-related transactions are recorded and maintained.

- **Issue, Return, Renew Books**
  - Librarian issues books to members after checking availability and membership validity.
  - When the book is returned, the module updates the database and marks the book as available again.
  - Renewal transactions extend the due date if allowed.
- **Fine Calculation**
  - Automatically calculates overdue fines based on the number of delayed days.
  - Updates the user's account showing pending fines.
  - The librarian can collect the fine and update the record.

---

### **4. Report Module**

This module provides analytical and operational reports for both admin and management.

- **Book Inventory Reports**
  - Displays total books, available books, issued books, and damaged/lost books.
  - Helps the library understand stock levels and plan purchases.
- **User Activity Reports**
  - Shows user activities such as books searched, books requested, books issued, renewal history, and fines paid.
  - Useful for tracking user engagement and identifying heavy users.
- **Transaction History**

- Maintains a complete record of all transactions including issue, return, etc.
- renew, fines, and reservations.
- Helps in audits, verification, and future reference.

## **5. Inventory & Catalogue Management Module**

This module focuses on maintaining the book catalogue and ensuring the availability of accurate stock details.

### **Features**

- **Book Stock Management**  
Track total copies, available copies, issued copies, damaged/lost copies.
- **Catalogue Maintenance**  
Add/update/delete book details (ISBN, category, edition, rack number).
- **Rack/Shelf Management**  
Assign rack/shelf location to books so users can easily locate them.
- **Vendor & Purchase Records**  
Maintain details of book purchases from suppliers.
- **Damaged/Lost Book Record**  
Keep track of books that are lost, replaced, or sent for repair.

### **Why Needed?**

Improves book organization, helps in audits, and ensures updated inventory information.

---

## **6. Notification & Alert Module**

This module handles automatic alerts and notifications for both admin and users.

### **Features**

- **Due Date Alerts**  
Notify members before the due date to avoid fines.
- **Overdue Notifications**  
Alerts for books not returned on time.

- **Fine Notifications**  
Send updates about pending fine amounts.
- **Request Approval Alerts**  
Notify users when their issue/renewal requests are accepted or rejected.
- **Book Availability Alerts**  
Notify users when a previously unavailable/reserved book becomes available.
- **System Alerts**  
Alerts to admin about low stock, expired memberships, damaged books, etc.

### Why Needed?

Improves communication, ensures timely transactions, and enhances user experience.

## Database Design (5 Tables)

**Table 1: admission:**

Field Name	Data Type	Description
student_id (PK)	INT	Unique student ID
name	VARCHAR(100)	Student's full name
father_name	VARCHAR(100)	Father's name
dob	DATE	Date of Birth
gender	VARCHAR(10)	Male/Female/Other
course_id (FK)	INT	Linked to course table
mobile	VARCHAR(15)	Contact number

**Table 2: course:**

<b>Field Name</b>	<b>Data Type</b>	<b>Description</b>
course_id (PK)	INT	Unique course ID
course_name	VARCHAR(100)	Name of the course
duration	VARCHAR(50)	Duration (e.g., "6 months", "1 year")
fees	DECIMAL(10,2)	Total course fee

**Table 3: fees:**

<b>Field Name</b>	<b>Data Type</b>	<b>Description</b>
fee_id (PK)	INT	Unique fee record
student_id (FK)	INT	Linked to student
total_fees	DECIMAL(10,2)	Total payable
paid	DECIMAL(10,2)	Amount paid
balance	DECIMAL(10,2)	Remaining amount

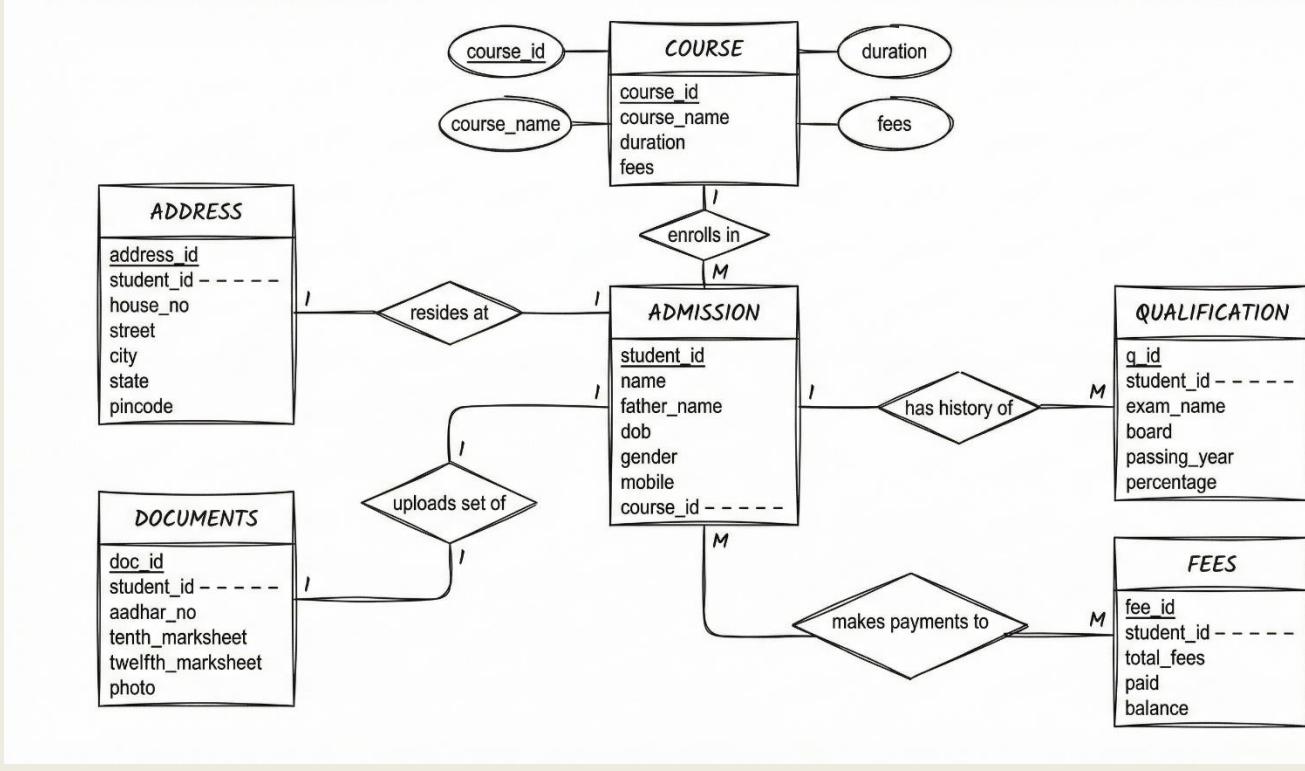

**Table 4: address:**

Field Name	Data Type	Description
address_id (PK)	INT	Unique record
student_id (FK)	INT	Linked to student
house_no	VARCHAR(50)	House/Flat number
street	VARCHAR(100)	Street name
city	VARCHAR(50)	City
state	VARCHAR(50)	State
pincode	VARCHAR(10)	Postal code

**Table 5: documents:**

Field Name	Data Type	Description
doc_id (PK)	INT	Unique document record
student_id (FK)	INT	Linked to student
aadhar_no	VARCHAR(20)	Aadhar number
tenth_marksheet	VARCHAR(255)	File path / scan stored
twelfth_marksheet	VARCHAR(255)	File path / scan stored
photo	VARCHAR(255)	Student photo

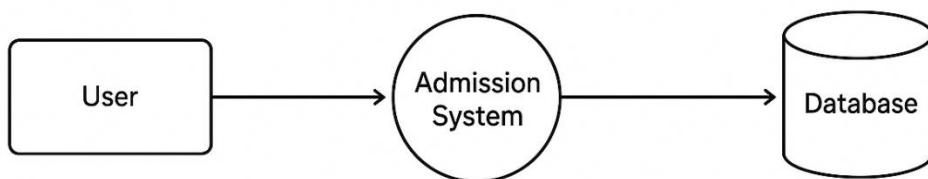

# ER Diagram Overview

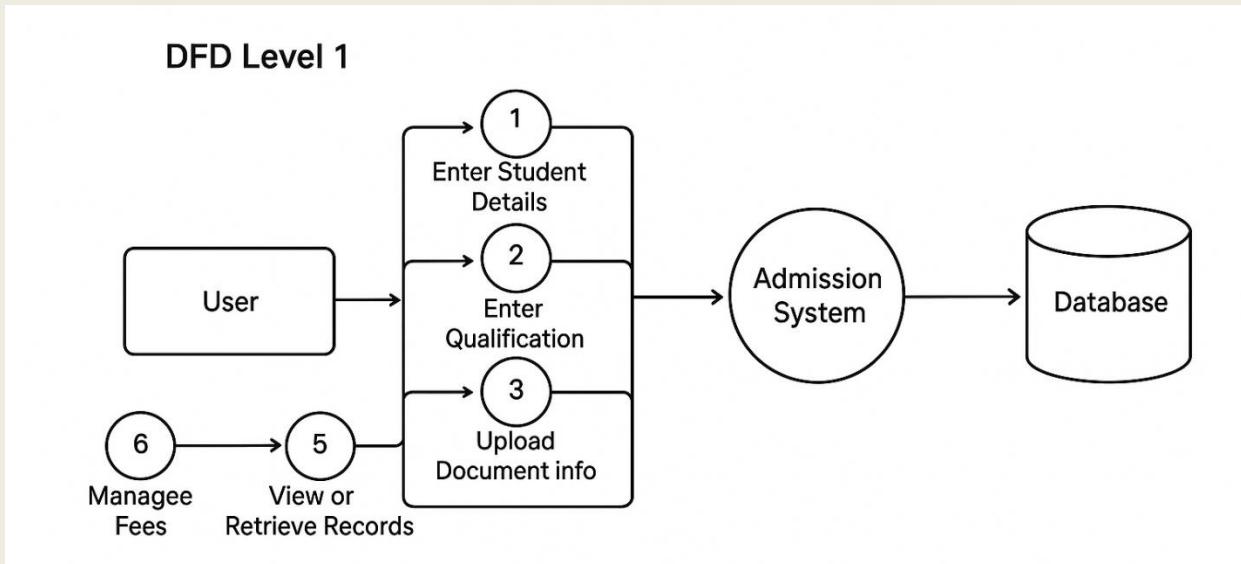

## Data Flow Diagram (DFD)

DFD Level 0:

DFD Level 0

## DFD Level 1:

## Platform Used

### Hardware Requirements

- ♣ Intel processor
- ♣ 4 GB RAM
- ♣ 200 MB free disk space

### Software Requirements

- ♣ Windows 10/11
- ♣ Java JDK (17 or above)
- ♣ Eclipse IDE
- ♣ MySQL Server & MySQL Workbench
- ♣ JDBC Connector JAR

---

## **Future Scope**

- ♣ Add graphical user interface (GUI)
- ♣ Online admission portal
- ♣ Admin login and authentication
- ♣ Automatic report generation (PDF/Excel)
- ♣ Multi-course enrollment
- ♣ Biometric or digital document verification
